Filesize: 1.19 MB

### ***Reviews***

*It is one of the best books. Indeed, it really is a play, nevertheless an amazing and interesting literature. It is extremely difficult to leave it before concluding, once you begin to read the book.*

Springer-Verlag New York Inc., United States, 2014. Hardback. Book Condition: New. 2014 ed.. 95 x 64 mm. Language: English . Brand New Book. Most biological reactions and functions occur within a narrow range of pH. Any changes in the pH have great impacts on the biological functional at every level, including protein folding, enzymatic activities and proliferation and cell death. Therefore, maintain the pH homeostasis at the local or systemic level is one of the highest priorities for all multicellular organisms. Many redundant mechanisms are in place to maintain the pH homeostasis, a topic that is well covered in the scientific literature and medical textbooks. However, when the pH homeostasis is disrupted in various physiological adaptations and pathological situations, resulting acidity may trigger significant pathophysiological events and modulate disease outcomes. Therefore, understanding how various cells sense and react to acidity have broad impact in a wide variety of human diseases, including cancer, stroke, myocardial infarction and diabetes, renal and infectious diseases. In this book, many investigators have summarized the molecular genetics on the detailed mechanisms by which different mammalian cells sense and response acidity. These chapters cover the acidity with broad impact in biological understanding and human diseases and review various sensing mechanism and cellular responses to pH alterations in both physiological (taste, pain) and pathological settings (ischemia and cancers). Furthermore, these authors present a broad spectrum of investigative approaches to cellular response to acidosis in a in wide variety of human diseases.
